CONTENTS

1. The earliest leperditicope arthropod: a new genus from the Ordovician of Spitsbergen
   M. Williams & David J. Siveter 97

2. A larger agglutinated foraminifer originally described as a marine plant: the case of Arthrodendron
   Ulrich, 1904 (Foraminifera), its synonyms and homonyms
   M. A. Kaminski, A. Udeman, T. Neagu & G. C. Catelan 103

3. Holocene austral palaeobiogeography of the Seto Inland Sea, Japan: impact of opening of the strait
   M. Yasuhara 111

4. A new serial Cretaceous planktic foraminifer (Family Heterohelicidae Cushman, 1927) from the Upper
   Maestrichtian of the equatorial Central Pacific
   M. D. Georgescu & S. Abramovich 117

5. Dinoflagellate cysts from the Upper Triassic (Norian) of northeastern Iran
   E. Ghoseiri-Nejad, M. J. Head & M. Zamani 125

6. Taxonomy and palaeobiogeographical significance for four new species of Semicytherura (Ostracoda, 
   Crustacea) from the Early Pleistocene Omma Formation of the Japan Sea coast
   H. Ozawa & T. Kamiya 135

7. Late Ordovician (Mirnantian) scolecodont clusters from the Soom Shale Lagerstätte, South Africa
   R. W. J. H. D. De Wever & L. O’Dogherty 147

8. Pliocene ostracods (Crustacea) from the Togakushi area, central Japan; palaeobiogeography of trans-
   Arctic taxa and Japan Sea endemic species
   H. Ozawa, M. J. Head & T. Tanabe 161

9. Late Quaternary benthonic foraminifera in a bathyhal core from the Leeward Islands, Lesser Antilles, 
   NE Caribbean Sea
   B. Wilson 177

MICROPALAEONTOLOGICAL NOTEBOOKS

1. Pentaspongoreta, nomen novum for the genus Anachoreta O’Dogherty, 1994 (Radiolaria), non Gistel,
   1848 (Hymenoptera)
   L. O’Dogherty & P. De Wever 189

2. Riedeliusella, a new name for the genus Riedelius De Wever, 1982 (Radiolaria), non Hudec, 1961 
   (Gastropoda)
   P. De Wever & L. O’Dogherty 191
Preparation and submission of manuscripts: In the first instance, manuscripts should be sent to S. Gillbee, Production editor, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath BA2 3AN. Any editorial correspond- ences should be addressed to the Editor. Production manuscripts (except those in Government Departments employment) are required to assign copyright to the Micropalaeontological Society. The Journal style is set from disc and authors should consult the “electronic text preparation’ notes that are available from the Production editor or can be found at www.tmsoc.org. Referees are appointed to evaluate manuscripts and the Editor’s judgement in case of correspondence in multi-authored works will be with the first- named author, unless otherwise arranged. Proofs will be sent directly to the author, who must read and correct them, returning them to the Production editor. Prompt attention to proofs is essential to avoid delay of publication of the issue.

Papers on all aspects of micropalaeontology are accepted, the principal fields of interest are listed on the cover of the Journal. Articles submitted should not exceed 8000 words in length, including references. There are c. 1000 words on a printed page. The English language should be used for publication in the Journal. The Journal may be contacted in multi-authored works will be with the first- named author, unless otherwise arranged. Proofs will be sent directly to the author, who must read and correct them, returning them to the Production editor. Prompt attention to proofs is essential to avoid delay of publication of the issue.
